

## The Voter Integrity Project

### Irregularities in the Michigan Voter Registration Database

After analyzing the publicly available voter registration archive provided by the Michigan Secretary of State, found here:

<http://69.64.83.144/~mi/download/20201012/Entire%20State%20October.zip>

We have identified several areas of concern.

After reviewing the records, we noticed on several occasions the date indicated under “Registration Date” was listed as “01/01/1900” for thousands of registered voters.

The secretary of state has issued some level of defense as a “clerical error” for these sorts of records.

While that may be true, we have identified that these errors did not occur at a consistent rate across all counties. Wayne County, Michigan has far more of these errors than other counties.

#### Number of voters who registered on January 1st, 1900

County	Voters Registered
Wayne	15975
Ingham	514
Houghton	370
Oakland	347
Gratiot	282
Manistee	224
Chippewa	203
Isabella	201
Otsego	184
Lenawee	179

*Note: Only top ten counties are included in the table*

Compare the two highest population centers in Michigan. Wayne County has a population of **1.7 million**, and Oakland County has a population of **1.2 million**.

[https://www.michigan-demographics.com/counties\\_by\\_population](https://www.michigan-demographics.com/counties_by_population)

This further illustrates the anomaly of the issues. The error rate in Wayne county is roughly **0.94%** and the error rate in Oakland is **0.03%**.

Wayne County experienced this rate in errors roughly **31 times** the frequency of Michigan's next most populous county.
